Application/Control Number: 09/757,778

Art Unit: 2871

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 9/2/03 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6, 7, 9, 13, 14, 18, 19, 21, 22 and 28-30 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 05-158015 (AK) cited by Applicant.

Note Figs. 1, 2, 4-6 and especially Fig. 3 which identically disclose the claimed semiconductor device and method including a pattern 41 comprising a same material as the bus line LG and provided in a same layer as the bus line, wherein the pattern is provided *adjacent to* a side edge of the substrate, and wherein the bus line is apart from the pattern and the side edge of said substrate. The term "adjacent" is broadly interpreted as "close" or "near by". See discussions of the remainder of the recited features in the text. It is noted that US 5,327,267 is the English equivalent of JP 05-158015.

Application/Control Number: 09/757,778

Art Unit: 2871

Claims 24 and 40-42 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 05-232511 (AL) cited by Applicant.

Note Figs. 1-3 and paragraphs 0017-0032 of the English translation which disclose all the recited steps of the instant claims, such as cutting the bus line (2, 4) from the short ring 9 without cutting said the TFT substrate to leave behind a pattern over the TFT substrate, the pattern being same as at least a part of the short ring while the pattern is free from a shorting function (Fig. 3); bonding the TFT substrate and a counter substrate together; and cutting the TFT substrate and said counter substrate along a common plane (Fig. 2), wherein the bus line cut from the short ring is apart from the pattern and the side edge of said TFT substrate (Fig. 3).

Claims 23 and 31-36 are allowed over the prior art of record because none of the prior art discloses or suggests a method comprising the steps of cutting the bus line from the short ring without cutting the substrate to leave behind a pattern over the substrate, the pattern being same as at least a part of the short ring while the pattern is free from a shorting function; and forming a sealant material over the substrate *after the cutting step*, wherein the bus line cut from the short ring is apart from the pattern and the side edge of said substrate.

Claims 4, 5, 8, 10-12, 15-17, 20, 25-27, 37-39 and 43 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 09/757,778

Art Unit: 2871

Claims 4, 5, 8, 10-12, 15-17, 20, 25-27, 37-39 and 43 are allowed over the prior art of record because none of the prior art discloses or suggests the features "a driver thin film transistor provided over said substrate and forming a driver circuit for driving said pixel thin film transistor; and a control circuit for controlling said driver circuit, wherein said control circuit is disposed at a control circuit accommodation portion of said substrate, said control circuit accommodation portion being thinner than other portions of said substrate", "a driver thin film transistor provided over said substrate and forming a driver circuit for driving said pixel thin film transistor; and a control circuit for controlling said driver circuit, wherein said control circuit is provided in said sealant material", "a driver thin film transistor provided over said substrate and forming a driver circuit for driving said pixel thin film transistor; and a control circuit for controlling said driver circuit, wherein said control circuit is provided over said substrate and adjacent to an opposite side edge of said substrate to said pattern", "packing a control circuit over said substrate for controlling a driver circuit made up of a driver thin film transistor, said driver thin film transistor being formed over said substrate for driving said pixel thin film transistor; and sealing said control circuit in said sealant material", "thinning a control circuit accommodation portion of said substrate to install therein a control circuit for controlling a driver circuit made up of a driver thin film transistor, said driver thin film transistor being formed over said substrate for driving said pixel thin film transistor".

Any inquiry concerning this communication should be directed to Tai Duong at telephone number (571) 272-2291.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
